7 reasons to stay invested in China equities

allianzgi.com

September 2021

Although recent news out of China has understandably unsettled the markets, we don't think it changes the long-term investment case. Volatility goes hand in hand with China's higher long-term return potential. Understanding the dynamics at play can help make these changes easier to take in stride.

1 China equities have always exhibited higher volatility – and attractive returns

Investing in China brings different risks and greater unpredictability compared with Western markets. The Chinese government's recent clampdown on tech firms and education companies illustrates this point. But investors have historically been rewarded with long-term outperformance. Indeed, as Exhibit 1 shows, an investment in the MSCI China Index from January 2000 to the end of August 2021 would have generated a 402% return. In the past, moments of volatility like this have proved to be buying opportunities for many long-term investors.

2 The US and EU were already focused on regulating big tech

There are many ways for investors to buy shares of Chinese companies. This has become even more important during China's recent regulatory clampdown, which affected some listings – particularly US-listed American depositary receipts (ADRs) and select Hong Kong-listed companies – more than others. With China A-shares constituting almost 70% of China's total market capitalisation size, China's capital markets are much broader and deeper than many investors realise (see Exhibit 2).

3 China's A-shares were less affected by recent volatility

The regulatory clampdown on tech giants and education firms didn't affect China A-shares as much as other listings (see Exhibit 3). It's another reasons for investors to explore the broad universe of Chinese equities – regardless of where the stocks are listed.

- Internet, education and ecommerce stocks tend to be better represented in Hong Kong-listed stocks and US-listed ADRs (American depositary receipts).
- A-shares (stocks of Chinese companies listed on exchanges in Shanghai or Shenzhen) tend to feature more companies in sectors such as industrials, healthcare and consumer goods.

4 Chinese stocks don't move in lockstep with other equity markets

China's equity markets are appreciated for their long-term potential for outperformance, but they're also useful as a portfolio-diversification tool. As shown in Exhibit 4, China A-shares have a correlation of 0.32 with global equities over the last 10 years, which means they move in different directions almost 70% of the time. (In comparison, US and global equities have a correlation of 0.97.) Holding A-shares in a global portfolio may help generate a better risk-return profile.

Exhibit 3: MSCI China A Onshore Index vs MSCI China Index performance since September 2020 (in USD, indexed to 100)

Source: Bloomberg, Allianz Global Investors. Data as at 31 August 2021. Based on total return performance in gross, in USD. Past performance is not indicative of future results.

Exhibit 4: historical correlation between major equity markets since 2011

	China A-shares	HK-listed China stocks	APxJ equities	GEM equities	Japan equities	US equities	European equities	World equities
China A-shares	1.00	0.61	0.47	0.45	0.24	0.3	0.3	0.32
Hong Kong-listed China stocks	0.61	1.00	0.85	0.83	0.51	0.5	0.57	0.58
Asia Pacific Ex-Japan equities	0.47	0.85	1.00	0.97	0.63	0.7	0.75	0.78
Global emerging market equities	0.45	0.83	0.97	1.00	0.6	0.69	0.77	0.78
Japan equities	0.24	0.51	0.63	0.6	1.00	0.57	0.67	0.69
US equities	0.3	0.5	0.7	0.69	0.57	1.00	0.8	0.97
European equities	0.3	0.57	0.75	0.77	0.67	0.8	1.00	0.91
World equities	0.32	0.58	0.78	0.78	0.69	0.97	0.91	1.00

■ Low correlation ■ High correlation

Correlation data is calculated based on historical return of respective MSCI indices for the past 10 years, using weekly USD return. China A-shares represented by MSCI China A Onshore Index; HK-listed China stocks by Hang Seng Chinese Enterprises Index; APxJ equities by MSCI AC Asia ex Japan Index; global emerging market equities by MSCI Emerging Markets Index; Japan equities by TOPIX Index; US equities by S&P 500 Index; European equities by MSCI Europe Index; world equities by MSCI World Index. Past performance is not indicative of future performance.

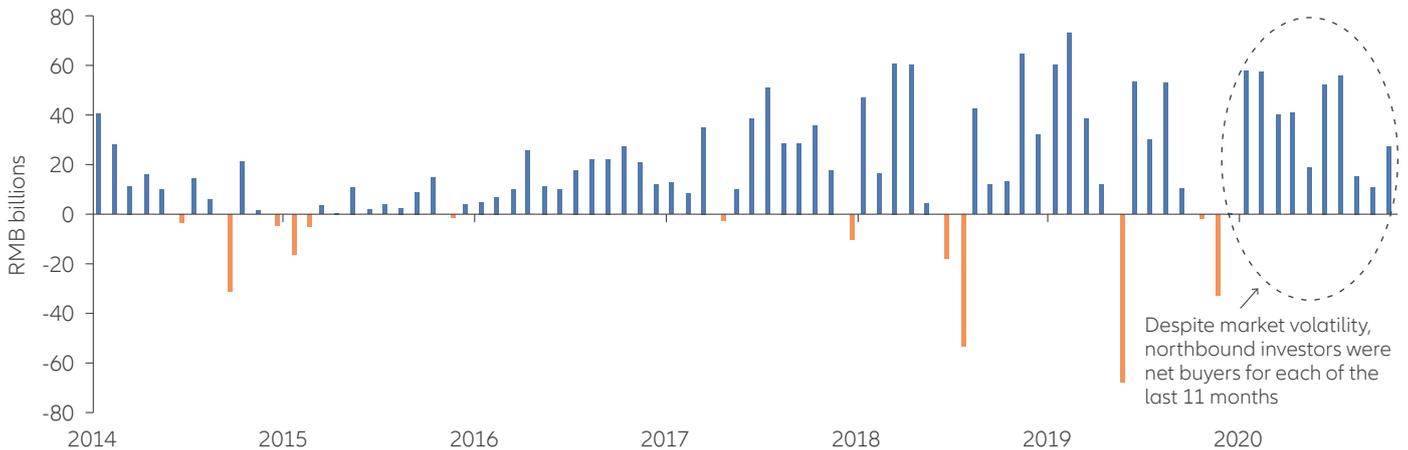

5 Foreign investors are still buying China equities, despite recent turmoil

Despite the negative news out of China, global investors have continued to add China A-shares to their portfolios (see Exhibit 5). August 2021 marked the ninth consecutive month of positive flows for this share class, suggesting a “buy the dip” mentality. The Chinese government recently helped lay the groundwork for greater cross-border investment with the launch of the

Shanghai and Shenzhen Stock Connect schemes in 2014 and 2016, respectively:

- In “southbound” trades, mainland China residents use the Shanghai or Shenzhen exchanges to buy Hong Kong-listed stocks.
- Investors outside of mainland China can use the Hong Kong exchange to buy A-shares in Shanghai or Shenzhen (known as a “northbound” trade).

6 Major global indices are adding large numbers of Chinese stocks

In a sign of China’s growing integration into global financial markets, major stock indices have been adding more Chinese stocks – reflecting the increasing

importance of China to the global financial system. But China’s representation in these indices still underplays the country’s significant economic potential (see Exhibit 6). Investors may want to consider allocating more to China than benchmarks do.

7 Innovation and transformation: key drivers of China's growth

China has come a long way in a short time. Once known as the "factory of the world", it shifted away from low-cost manufacturing towards the high-tech areas that are

essential to its growth – and, crucially, its desire for self-sufficiency. A rapidly expanding middle class, increasing domestic consumption, high-tech innovation and a commitment to a carbon-free economy are all key parts of the China growth story.
